

ERP/SCM

With over 15 years of experience in the field of ERP, ESCS can help your organization achieve its goal of full life cycle implementation. Moreover, we have dedicated our careers to the process manufacturing industry. That is why we have an in depth knowledge of the industry and the application software that runs these organizations. We realize that the IT strategy can be an important factor in the overall business strategy, that is why we come prepared to consult with you on the latest visions in the industry and show you the latest products available.

We have coupled our process industry and Information Technology experience and create an in depth project plan for your implementation needs.

Enterprise Resource Planning systems are continuously evolving and their complex programming structure and interrelationships with other applications such as front office CRM, Supply Chain, coupled with expectations such as quick implementation turn around time stipulates that the project teams have to be focused and knowledgeable. At the same time these teams must be cognizant to the needs of each focus group and make sure that training and functional business needs are adhered to.

We at ESCS, understand the structural needs of process manufactures, and that is why we have tailored our fee structure and project plans to individual clients. We have planed our expansion and business strategy around small process manufacturers so that we can dedicate our time and expertise to each and every client personally. We want to be know in the industry as one of the few consulting organizations that still has the personal touch and dedicates itself to the goals of the organization as any conscientious employee would.
