

Homi has 15 years of experience in software development and life cycle environment. She has been instrumental in creating an integrated Development Environment “Application Builder”, which minimizes the time and complexity of developing applications. She has developed in Java and Swing classes to allow end users to design screens that would allow them to resolve business specific issues in their web environments. Her contributions to facilitating design environments for applications had also won some awards. Her talents enable us to provide the best of the bread technology to our clients in the area of programming and application development life cycles.

Homi is versed in the following programming languages and environments; Jbuilder, Sun Java/Swing, Visual Café, MSVC++, MFC, Win SDK, Pascal.
