

Albert, is our resident expert with the CIMPRO ERP application. He has authored many tools within the Business BASIC application development environment, for CIMPRO customers. He has over eighteen years of experience with BASIC programming language and the IDOL database.

He has worked on distinct projects such as,

- Terminal and Task interface language engine, to automate daily business process.
- Turnkey accounting, remote data collection and communication system for the retail grocery industry.
- Point of Purchase inventory and sales analysis accounting systems
- Database Manager and prototype utility.
- Library of functions used as Kernel for Interactive natural language.

Albert had served as programming supervisor for many companies in the process manufacturing and brings a wealth of knowledge within this industry. He has worked as support specialist, programming guru, help desk creator, and business liaison between the MIS group and the user community. His wealth of information on CIMPRO makes him one of the foremost authorities on this ERP. He has worked on all modules and in some form or another has made modifications and enhancements to the package.

Albert can customize, CIMPRO or be your extension on the support side. He has proven time and again that his expertise has saved clients time and money, since he did not have to go through the learning curve on the clients time. Most importantly you will see the rates charged by ESCS for Albert's time is below the industry standard. We feel that a repeat business is more important than charging a client up front for a service that need not be expensive.
